

focus 43°

A light pyramid diagram is centered behind the table, illustrating the spread of light from a point source. The pyramid's apex is at the top, corresponding to the 'focus 43°' label. The horizontal width of the pyramid at each height level matches the 'ø (m)' column values. The light intensity 'E0° (lx)' is represented by the density of the pyramid's shading, which is darkest at the top and becomes progressively lighter as it expands downwards.

h (m)	E0° (lx)	ø (m)
1	450	0.80
2	112	1.59
3	50	2.39
4	28	3.18
5	18	3.98
